# CCTV, Confined Space Working & Search & Rescue.

## CCTV Inspections

Glanville Environmental provides a professional CCTV survey service. Working in a wide range of environments from sewers and drains to tanks and chambers, CCTV is a valuable tool for asset investigation, assessment and maintenance. We use the latest cutting edge equipment and our highly experienced, fully qualified operators provide a high resolution, full colour survey of some of the most inaccessible assets. Digital recordings of the survey can then be used as part of a complete picture backed up by evidence on DVD disc. With our optional Sewer Viewer Cloud based storage system our clients are able to view survey data at anytime from anywhere in the world that has an internet connection. As leaders in the field of CCTV surveys Glanville Environmental supply survey information as a complete electronic package that utilises the latest digital mapping, analysis and reporting software.

## Glanville Environmental supply

- Full mainline self-leveling colour camera systems with full pan and tilt facilities.
- Remote working CCTV survey units
- Self-contained battery operated solo pro CCTV systems.
- Wincan v8 reporting software
- Operators trained to WRc OS20X and OS21X standards
- PTS trained surveyors

## Confined Space Working

Glanville Environmental has unrivalled experience in confined spaces working, our confined space working teams are trained to the very highest City & Guilds standards and where traversing is required our crews can be supported by our fully City & Guilds certified in house rescue teams.

Our Managers are certified to the very highest 6150-61 City & Guilds Management standards enabling them to be fully authorised and compliant to prepare and sign off documented risk assessments and method statements.

Confined Space Search & Rescue Teams

It is more and more becoming common practice that any difficult access / traversing / confined space working requires additional support from dedicated site rescue teams. It is no longer an option within safe working procedures to rely on the emergency services as the only form of rescue.

Our in house dedicated rescue teams are fully certified and compliant to City & Guilds standards and utilise the latest equipment / technology the market has to offer.

We also offer a safe working risk assessment and method statement production service fully compliant with current legislation, ensuring that the safest possible working environment is achieved.
