

## Waste Disposal, Treatment & Handling

We specialise in collecting and treating waste with minimal environmental impact and offer a unique and highly efficient service utilising our Treatment Plant based just off the A38 Lee Mill nr Plymouth. Sewage treatment is a multi-stage process to renovate waste water before it re-enters a drainage system or applied to land. Our plant removes organic matter and solids by using a process of aeration and special polymers that remove all the bacteria and suspended solids. Once it has completed this process, samples are taken and tested and the final effluent is discharged into the SWW drainage system. Our plant is fully licensed by the South West Water and maximum throughput of

Environment Agency and capable of processing a 300m<sup>3</sup> per shift.
