Waste Tankering & Vacuumation

With over 30 years' experience in waste management and disposal, we operate one of the most modern fleets of waste tankers in the South West with tankers that are equipped with high pressure jetting facilities for removal of blockages and clean-up operations.

Our tankers are able to contain up to 30,000 litres of liquid in one visit. We also operate tankers as small as 5,500 litres (2,00 gallons) to make the removal of smaller loads more cost effective. Our fleet of tankers undergo regular inspections and tests to ensure the tanks conform to the latest regulations.

With the ability to empty septic tanks, grease traps, oil interceptors, storage tanks, trade effluent, road gully waste, treatment plant process tanks and municipal wastes. We can offer collection, treatment or disposal throughout the whole of the South West & Midlands.

Difficult to handle waste such as sludge and heavy silt are removed with ease using our high powered Liquid Ring Vacuum Units operating by a diesel driven vacuum pump. These units are well suited to remove and transport thick and solid materials such as slurries and mud

Septic Tanks

From time to time, even perfectly operating septic tanks need cleansing and the removal of excess waste. There is even a cost benefit in having the tank emptied on a regular basis, as the waste treatment costs are lower.

We have the equipment and expertise to efficiently cleanse septic tanks in Devon, Cornwall, Dorset and Somerset, and treat the transferred waste in an ethical and environmental manner at our own treatment works.

Our site engineers are also trained to spot faults and advise on any issues that you may be concerned with, including the regularity of emptying, and any issues regarding soakaways, drains and odour management.

We can also provide CCTV surveys and quotations for any remedial or replacement works that may be required

Special offer – 10% off for multiple tanks on single visit

Devon & Cornwall - 01752 690400
Somerset & Midlands - 01278 788926

Get together with your neighbours and book up to 3 tanks for a single cleansing visit to receive a 10% discount on the whole lot. Please call us on 01752 690400 for details.

Glanville Environmental specialise in industrial cleaning and can deal with large volumes of waste every day. We have 30 years' experience in transporting waste and operate a large fleet of specialist vehicles ranging from 6,000 gallon tankers to more compact 1200 gallon capacity units.

Glanville Environmental is a registered waste carrier / broker capable of transporting most types of waste in liquid or sludge form.

We work very closely with our clients to identify the most efficient options to deliver quick results that minimise transport costs and keep environmental impacts to a minimum.

Glanville Environmental Waste Services:

Analysis of Waste:

Precise classification is essential for safe disposal. Where a project requires the waste to be analysed we can obtain full laboratory testing and results, this is vital to ensure no hazardous waste is taken to landfill.

Emergencies

Glanville Environmental operates an emergency tankering service 24 hours 365 days.

Disposal

Glanville Environmental owns its own fully licensed waste treatment facility and always follows environmentally responsible practices. We always recycle where possible.
