

Our NEW Lateral Launch System

Improve Asset Intelligence

Glanville
ENVIRONMENTAL
An Adler & Allan company

Unlocking Previously Inaccessible Networks

Our advanced Mainline Lateral Launch CCTV capability enables direct inspection of lateral connections and branch pipework from the main sewer, providing access to assets that cannot be effectively surveyed using traditional CCTV techniques.

Key Benefits

- Access previously unreachable assets
- Improve network intelligence and asset understanding
- Identify infiltration and inflow sources faster
- Locate hidden structural defects and connection failures
- Reduce customer and public disruption
- Support targeted rehabilitation decisions
- Reduce unnecessary excavation and investigation costs

System Capabilities

1. Up to 350m mainline inspection capability
2. Up to 45m lateral launch capability
3. 50mm pan and rotate camera
4. 360° rotation, ±135° pan
5. Integrated laser defect measurement
6. 500m Kevlar reinforced cable

Applications

- Infiltration & Inflow Investigations
- Pollution Reduction & Misconnection Detection
- DG5 & Flooding Investigations
- WINEP & AMP Programmes
- Rehabilitation Planning
- Post-Repair Verification

More Than A Survey

Investigate. Diagnose. Repair. Verify.

As part of the wider Adler & Allan Group, Glanville Environmental delivers a complete end-to-end service from investigation through to remediation.
